Gum Reshaping

A Solution for Short Teeth

Proportions pay an important role in our perception of esthetics. The position of your upper lip when smiling, the proportion on the length and the width of the teeth is the major factor in the beauty of a smile and a face. The disproportional short teeth are not pleasing to the human eye and it is especially noticeable when you have an open smile showing the whole tooth. Sometimes it is not really a short tooth, it just has too much of a gum burring it inside. By performing a cosmetic reshaping of the gum we can cerate a striking difference in your appearance. The way to look your best is not necessary the most complicated dentistry and you may not need anything else but the cosmetic reshaping of your gums in such a way that the pleasing proportions and the symmetry of your gums would greatly improve your smile.

Testimonials

"..I didn't like the way my gum looked when I smile and now after such a short procedure I love to smile. I think you are great dentist and you've treated me in a very special way."
—Ms. J. 32 y.o.
