

Porcelain Veneers

Strong and resistant to stains, bonded to gently prepared front teeth, veneers cover the outside of the tooth. Made from thin but strong porcelain they will laminate your teeth. They can change your smile, improving the shape, position and color of your teeth, straightening them and giving your smile a stylish, fabulous look. Bonded to your teeth they produce unbelievable results rejuvenating your teeth and smile. It could change your life in just a couple of visits.

After

Porcelain Veneers

Advantages of Veneers

If your teeth are discolored, or have some mismatching fillings, or slightly misaligned and you want to look your best then the porcelain or hardened composite covering the front of your teeth may be the best solution. The use of direct composite has some limitations including the difficulty to control color, shape, strength etc. Instead, porcelain is the natural cosmetic remedy for natural teeth. These veneers (covers) produced in the dental lab and these shortcomings of a direct bonding are mostly eliminated. They could be tried on first so that you can see if you like it and then bonded to your teeth.

Testimonials

"...My family and friends are very impressed with improvements and I am too very happy with results performed by Dr. Joffe. The dental work that you've done for me was the best investment ever made..."

—Mrs. R., 51
